APPENDIX for

"Chronic Pain Diagnosis based on Artificial Intelligence:

A System Review and Research Vision"

Appendix Table 1. Inclusion and exclusion criteria

No.	Category of Criteria	Include Criteria	Exclude Criteria
1	Types of Pain	Studies focused on the chronic pain	Studies focused on the acute pain, overlapping pain, traumatic brain injury
2	Task of the Study	Studies focused on the prediction, classification, identification, assessment and diagnosis of chronic pain	Studies focused on the classification and identification of chronic pain-related information rather than the diagnosis of chronic pain, as shown the follows: • chronic pain medicine usage • chronic pain intensity prediction • complications of chronic pain (e.g., multiple sclerosis, depression, insomnia, brain dysfunction, etc.) • chronic pain prevention • treatments for chronic pain • pain management • pain relief • development of chronic pain • severity of chronic pain • chronic pain related operation • clinical notes identification • sex differences of chronic pain • identification of subgroups of chronic pain patients • diet of the chronic pain patients • pain induced
3	Machine Learning Techniques	Modern machine learning techniques: Adaptive boosting, Bayesian, decision trees, fuzzy logic, gradient boosting, k-means clustering, natural language processing, nearest neighbors, neural networks, principal component analysis, random forests, reinforcement learning, simulated treatment learning, support vector machines	Not use artificial intelligence approaches, or only use traditional machine learning approaches, such as: Rule-based systems, Logistic and linear regression, Linear mixed-effect model, ANOVA
			Sample size less than 10 patients
			Did not report standard performance metrics (e.g., accuracy or AUC) or comparisons with a control group for at least one modern AI model.

4	Article Type	Peer-reviewed articles describing: - Original research - Structured reviews of the literature reported in accordance with PRISMA guidelines	Not published in the English language
5	Species of Samples	Human	Different animals except human
6	Publication Year	Articles published between 2012 to 2022 (Last ten years)	Articles published before 2012

Appendix Note 1. PubMed (NCBI) Search Strategy

Appendix Note 4. Survey Paper List

No.	First Author	Year	Title	Database	PMID
1	D'Antoni, F	2022	Artificial Intelligence and Computer Aided Diagnosis in Chronic Low Back Pain: A Systematic Review	WoS	35627508
2	D'Antoni, F	2021	Artificial Intelligence and Computer Vision in Low Back Pain: A Systematic Review	WoS	34682647
3	Jenssen, MDK	2021	Machine Learning in Chronic Pain Research: A Scoping Review	WoS	33259458
4	Boissoneault, J	2017	Biomarkers for Musculoskeletal Pain Conditions: Use of Brain Imaging and Machine Learning	WoS	28144827

Appendix Table 2. Excluding Paper and Corresponding Excluding Reasons during Full-text Reading (N = 21)

No.	First Author	Year	Title	Database	PMID	Exclude Reason
1	Abdollah V	2021	Texture analysis in the classification of T (2) - weighted magnetic resonance images in persons with and without low back pain	PubMed	33247597	This paper only uses the random forests algorithm to select the most promising classifiers. But they use the linear mixed-effect model for the low back pain daignosis.
2	Moustafa S	2020	Accurate diagnosis of endometriosis using serum microRNAs	PubMed	32165186	According to ICD-11, endometriosis is belong to diseases of the genitourinary system, rather than chronic pain.
3	Yang Z	2020	Combining deep learning with token selection for patient phenotyping from electronic health records	PubMed	31996705	This paper aims to identify disease phenotypes from EHR. Chronic pain is one of the 10 diseaese (including Depression, Psychiatric Disorders, Obesity, Substance Abuse, Alcohol Abuse, Chronic Pain, Chronic Neuro, Adv. Lung Disease, Adv. Heart Disease, Adv. Cancer). So this article is not focused on chronic pain diagnosis.
4	Strik C	2019	Risk of Pain and Gastrointestinal Complaints at 6Months After Elective Abdominal Surgery	PubMed	30107242	This study aims to assess risk factors instead of diagnosing or identifying chronic postoperative abdominal pain (CPAP).
5	D'Antoni, F	2022	Artificial Intelligence and Computer Aided Diagnosis in Chronic Low Back Pain: A Systematic Review	WoS	35627508	Survey paper
6	Keller, AV	2022	Unsupervised Machine Learning on Motion Capture Data Uncovers Movement Strategies in Low Back Pain	WoS	35497350	This study presented a biomechanical biomarker that could potentially identify LBP subjects. The performance of this biomaker is unknown as no classification experiments or accuracy is reported.
7	Nephew, BC	2022	Depression Predicts Chronic Pain	WoS	34908146	This study focuses on the potential relationship

			Interference in Racially Diverse, Income-Disadvantaged Patients			between depression and chronic pain, which does not match the topics of chronic pain dignosis or classification.
8	D'Antoni, F	2021	Artificial Intelligence and Computer Vision in Low Back Pain: A Systematic Review	WoS	34682647	Survey paper
9	Jenssen, MDK	2021	Machine Learning in Chronic Pain Research: A Scoping Review	WoS	33259458	Survey paper
10	Brown, TT	2020	The FUTUREPAIN study: Validating a questionnaire to predict the probability of having chronic pain 7-10 years into the future	WoS	32817710	This study aims to predict the probability of chronic pain in the future 7–10 years, which does not match the topic of diagnosing or identifying chronic pain. And
11	Boissoneault, J	2017	Biomarkers for Musculoskeletal Pain Conditions: Use of Brain Imaging and Machine Learning	WoS	28144827	Survey paper
12	Mauricio, A	2020	Chronic Pain Estimation Through Deep Facial Descriptors Analysis	Google Scholar	N.A.	Pain intensity prediction
13	Grauhan, NF	2021	Deep learning for accurately recognizing common causes of shoulder pain on radiographs	Google Scholar	33611622	This paper aim to recognize for common causes of shoulder pain (including both acute and chronic causes), not for chronic pain diagnosis.
14	Guan, B	2022	Deep learning approach to predict pain progression in knee osteoarthritis	Google Scholar	33835240	This paper aim to predict pain progression (the changes in pain score between baseline and two or more follow-up time over the first 48-months) in knee osteoarthritis, rather than chronic pain diagnosis.
15	Schmidt, D	2021	Deep learning takes the pain out of back breaking work - Automatic vertebral segmentation and attenuation measurement for osteoporosis	Google Scholar	34598006	This paper only use the deep learning technique to segment CT image for“vertebrae”identification, which is a part of the knee osteoporosis diagnosis.
16	Ibrahim, Said A	2021	Artificial intelligence for disparities in knee pain assessment	Google Scholar	33442017	This paper focus on the exploration of racial disparities in the assessment of knee osteoarthritis, rather that diagnosis of knee osteoarthritis
17	Lukkahatai N	2018	A predictive algorithm to identify genes that discriminate individuals with fibromyalgia syndrome diagnosis	Survey Paper	30538537	Machine learning is just part of the methods they used, not for the main diagnosis task

			from healthy control subjects			
18	Ultsch A	2016	A data science approach to candidate gene selection of pain regarded as a process of learning and neural plasticity	Survey Paper	27548044	Used machine learning to combine the knowledge to identify the genes relevant to pain, rather than diagnosis.
19	Lee J	2019	Machine learning-based prediction of clinical pain using multimodal neuroimaging and autonomic metrics.	Survey Paper	30540621	Predict pain intensity, rather than diagnosis.
20	B Mathew	1998	Artificial intelligence in the diagnosis of low-back pain and sciatica	Survey Paper	2970122	This paper is published in 1988
21	Masoud Abdollahi	2020	Using a Motion Sensor to Categorize Nonspecific Low Back Pain Patients: A Machine Learning Approach	Survey Paper	32604794	This paper focuses on categorization of nonspecific low back pain patients to low, medium and high risk categories, rather than chonic pain diagnosis.
22	J B Bishop	1997	Classification of low back pain from dynamic motion characteristics using an artificial neural network	Survey Paper	9431637	This paper is published in 1997
23	Karabulut, EM	2014	Effective automated prediction of vertebral column pathologies based on logistic model tree with SMOTE preprocessing	Survey Paper	24753003	This paper focus on the identification of Vertebral Column Pathologies, which may cause acute pain or chronic pain, rather than diagnosis of chronic pain.
24	N W Sanders	2000	Automated scoring of patient pain drawings using artificial neural networks: Efforts toward a low back pain triage application	Survey Paper	10913774	This paper is published in 2000
